In September 2015, world leaders adopted the 2030 Agenda for Sustainable Development with the goal to end poverty, improve health, reduce inequality and address climate change by 2030. To measure progress, 17 Sustainable Development Goals (SDGs) were created, each with specific targets to be achieved over the next 15 years. Each goal includes a set of indicators to track success. PMA2020 provides data for several of these indicators, allowing government officials, civil society, researchers, world leaders and other stakeholders to track progress towards achieving these ambitious goals more frequently than ever before. This brief provides data and indicators available from the second round of the PMA2020 survey in Kenya, conducted in 2015.

SDGs in Kenya

While Kenya made substantial progress toward meeting the Millennium Development Goals (MDGs), progress can be uneven across goals and within the country. Strides have been made in attaining universal primary education; reducing infant mortality and in the fight against HIV/AIDS. However, SDG progress must focus more on gender and socio-economic equity of benefits.

“It is only by identifying the disadvantaged or excluded groups, that evidence-based policies, programs, and practices can be designed and inequalities tackled effectively... In addressing access to reproductive health matters and gender equality, there is no space for complacency... For development to be sustainable and resilient, it must be inclusive and equitable, [and] given that half of humanity are women, their empowerment is a must and not an option” -- Sicily K. Kariuki, (Cabinet Secretary for Public Service, Youth and Gender Affairs in the Government of Kenya)

Indicators on wealth and equity

**Two fifths of the population of Kenya is under the age of 15**

Access to basic services varies by wealth. While nearly all wealthy households (highest quintile) have access to electricity (99.0%), just 0.3% of the poorest fifth do. Almost all (97.1%) of the wealthiest households have improved water sources compared to 44.4% of the poorest households. Of the wealthiest households 60.7% have access to sanitation facilities compared to 6.1% of the poorest.

Despite overall improvement in access to basic services, not all households have electricity and improved water and sanitation.

**Percentage of female heads of household by wealth quintile:**

One quarter of all households are headed by females, irrespective of wealth status.
School Attendance

Despite impressive gains in girls’ education, secondary and tertiary school attendance still lags in the poorest 60% of households.

Family Planning Indicators

Thirteen percent of women age 15-49 have unmet need for family planning.

Target 3.7 aims to ensure universal access to sexual and reproductive health services.

Just under half of all women 15-49 (46.0%) use a modern method of contraception. Three fourths of women (75.0%) have their demand for family planning satisfied by a modern method of contraception. Unmet need for family planning (13.6% among all women) is higher in the poorest households (15.3%) compared to the wealthiest (9.3%).

Meeting unmet need for all women remains an important goal for sustainable human development. Progress is needed among the poor in Kenya.

School Attendance

Despite impressive gains in girls’ education, secondary and tertiary school attendance still lags in the poorest 60% of households.

Target 4.1 aims for all girls and boys to complete free and equitable primary and secondary school.

Almost half of women age 15-24 in Kenya (47.2%) have attended some secondary school. 36.7% of women in the poorest 20% of households have attended or are attending secondary school. 38.2% of women from the wealthiest quintile attend university or an academy program compared to 2.8% from the poorest 20%.

Increasing opportunities for education for all women in Kenya is important in meeting the sustainable development targets.
Early Marriage, Early Childbearing

Women age 18-24 in the poorest households are nearly three times more likely to marry by age 18 than women in the wealthiest

Water and Sanitation

Only 27.3% of the household population rely on an improved, non-shared sanitation facility as the main facility

GOAL 6
Clean Water & Sanitation

Target 6.2 aims to achieve access to equitable hygiene for all and eliminate open defecation.

Many data sources measure only the main source of water and the main sanitation practice used by each household. PMA2020 provides a more complete picture by measuring all regular household water sources and sanitation practices – those used by households several times per week during at least one season of the year. As a result, PMA2020 data show that many more people regularly practice open defecation than other surveys record, providing valuable insight and a more realistic baseline for the SDG target of eliminating open defecation.

46.8% of households use non-improved sanitation facilities, and 49.8% of the household population with an improved main drinking source have intermittent access.

All results for Goal 6 are reported as the percent of the household population.

About PMA2020/Kenya

PMA2020 uses innovative mobile technology to support low-cost, rapid-turnaround surveys to monitor key indicators for family planning. The project is implemented by local university and research organizations in 11 countries, deploying a cadre of female resident enumerators trained in mobile-assisted data collection. PMA2020/ Kenya is led by the Ministry of Health in collaboration with International Centre for Reproductive Health Kenya (ICRHK), National Council for Population and Development, and Kenya National Bureau of Statistics. Overall direction and support is provided by the Bill & Melinda Gates Institute for Population and Reproductive Health at the Johns Hopkins Bloomberg School of Public Health. PMA2020 is funded by the Bill & Melinda Gates Foundation. For more information on PMA2020 please visit http://www.pma2020.org. Data collection for this survey round (4) took place between November 10 and December 20, 2015. This brief has been developed in partnership with the Advance Family Planning advocacy initiative (AFP).
