## PERFORMANCE, MONITORING & ACCOUNTABILITY 2020

**PMA2020** is a five-year project that uses innovative mobile technology to support low-cost, rapid-turnaround, nationally-representative surveys to monitor key indicators for family planning. The project is implemented by local university and research organizations in ten countries, deploying a cadre of female resident enumerators trained in mobile-assisted data collection. PMA2020/Burkina Faso is led by l'Institut Supérieur des Sciences de la Population (ISSP) at the University of Ouagadougou. Overall direction and support is provided by the Bill & Melinda Gates Institute for Population and Reproductive Health at the Johns Hopkins Bloomberg School of Public Health through a grant from the Bill & Melinda Gates Foundation.

## SAMPLE DESIGN

PMA2015/R2 Burkina Faso used a two-stage cluster design with urban-rural strata. A sample of 53 enumeration areas (EAs) was drawn from the INSD master sampling frame. Each EA was listed and mapped; 35 households were systematically selected with a random start; and up to 3 health service delivery points (SDP) were selected in each EA. Occupants in selected households were enumerated and eligible females of reproductive age (15-49) were contacted and consented for interviews. Data collection was conducted between May and June, 2015. The final sample (and completion rates) included 1,733 households (97.5%), 2,198 females age 15 to 49 (95.6%) and 86 SDPs (96.6%).
