Globally, many women and girls face challenges when managing their menstruation. Failure to address the menstrual hygiene needs of women and girls can have far-reaching consequences for basic hygiene, health and wellbeing, ultimately affecting progress towards the SDG goal of gender equality and dignity for all.

Menstrual Hygiene Management (MHM) refers to the practice of using clean materials to absorb menstrual blood that can be changed privately, safely, hygienically, and as often as needed for the duration of the menstrual cycle. PMA2020 is the first survey platform to provide data on MHM indicators on a large scale. The data presented here are from a nationwide survey in Indonesia of 8,252 females aged 15–49, who reported menstruating in the past 3 months, conducted by PMA2020/Indonesia.

**SAFETY, CLEANLINESS, AND PRIVACY OF MHM LOCATION**

- **Clean**: Urban > Rural
- **Private**: Urban > Rural
- **Safe**: Urban > Rural
- **Able to be Locked**: Urban > Rural
- **Soap and Water**: Urban > Rural

**DISPOSAL OF MENSTRUAL MATERIALS**

*Women are asked to select all types of disposal methods they use.

- **Sanitary pads**: Rural = 88.5%, Urban = 95.6%
- **Cloths**: Rural = 14.5%, Urban = 6.9%
- **Cotton Wool**: Rural < 1.0%, Urban < 1.0%
- **Other Materials (e.g. tampons, toilet paper, foam, natural materials)**: Rural < 1.0%, Urban < 1.0%

**WASHING, REUSE AND DRYING OF MATERIALS**

- 13.1% of women report that they wash and reuse their MHM materials.
- Of those who wash and reuse, 78.8% reported that their materials were completely dry before reuse.

**78.8% OF WOMEN** in Indonesia report having everything they need to manage their menstruation.
